

# Managing InfoSec Risk During a Global Pandemic

## Key Takeaways – Recommendations for the Remote Workforce

1 Use company issued devices where possible

2 Be vigilant against phishing attacks, business email compromise, and COVID-19 stimulus fraud

3 Protect online accounts (use different passwords, clear browsing history, do not store passwords in browser)

4 Use a personal password manager (i.e. LastPass, KeePass)

5 Secure your home Wi-Fi network (WPA2/3, strong password, create guest network, disable UPnP)

6 Do not store company information on personal devices, email accounts, or cloud storage services

7 Use MFA (multi-factor authentication) for personal accounts, especially e-mail

8 Only browse on sites that use HTTPS and disable JavaScript

9 Turn on the home router firewall and the operating system firewall

10 Utilize an industry accepted anti-malware and anti-virus tool

11 Confirm that all your devices are updated to the latest software and firmware patch levels

12 Continuously back-up your data and confirm a copy is stored offline
